## 9. Timing Characteristics(4-SPI)

The serial interface consists of serial clock SCLK, serial data SDIN, D/C#, CS#. In SPI mode, D0 acts as SCLK, D1 acts as SDIN. For the unused data pins, D2 should be left open. The pins from D3 to D7, E and R/W# can be connected to an external ground.

**Table 8-4 : Control pins of 4-wire Serial interface**

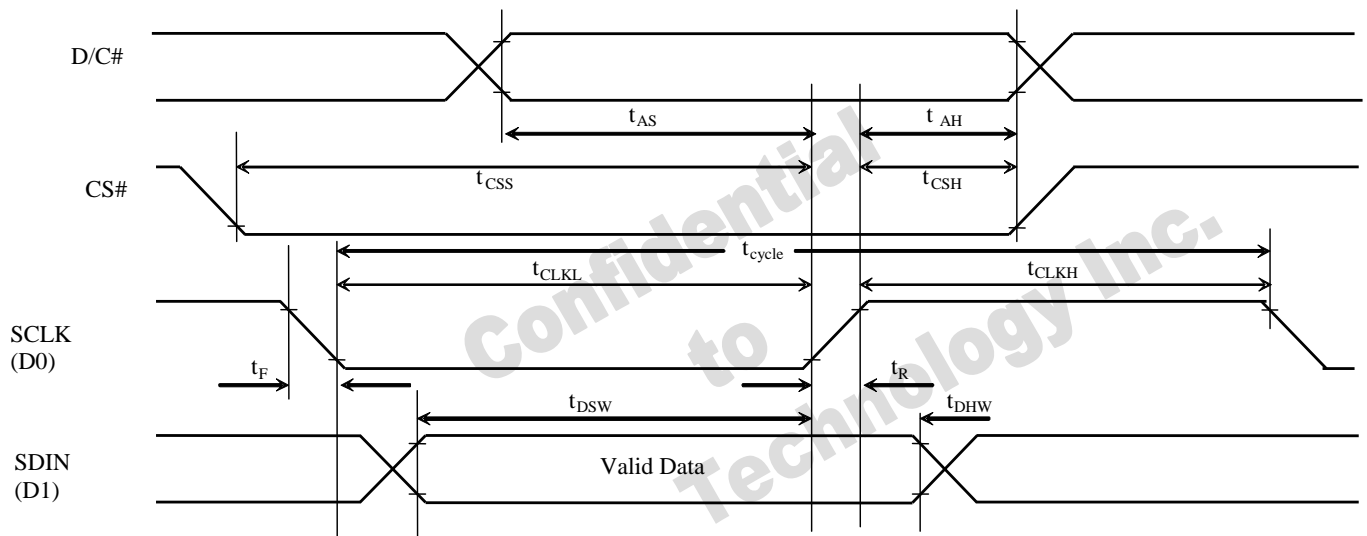

Function	E(RD#)	R/W#(WR#)	CS#	D/C#	D0
Write command	Tie LOW	Tie LOW	L	L	↑
Write data	Tie LOW	Tie LOW	L	H	↑

**Note**

- (1) H stands for HIGH in signal
- (2) L stands for LOW in signal

SDIN is shifted into an 8-bit shift register on every rising edge of SCLK in the order of D7, D6, ... D0. D/C# is sampled on every eighth clock and the data byte in the shift register is written to the Graphic Display Data RAM (GDDRAM) or command register in the same clock.

Under serial mode, only write operations are allowed.

( $V_{DD} - V_{SS} = 2.4$  to  $2.6V$ ,  $V_{DDIO} = 1.6V$ ,  $V_{CI} = 3.3V$ ,  $T_A = 25^\circ C$ )

Refer to the Technical Manual for the SSD1322U

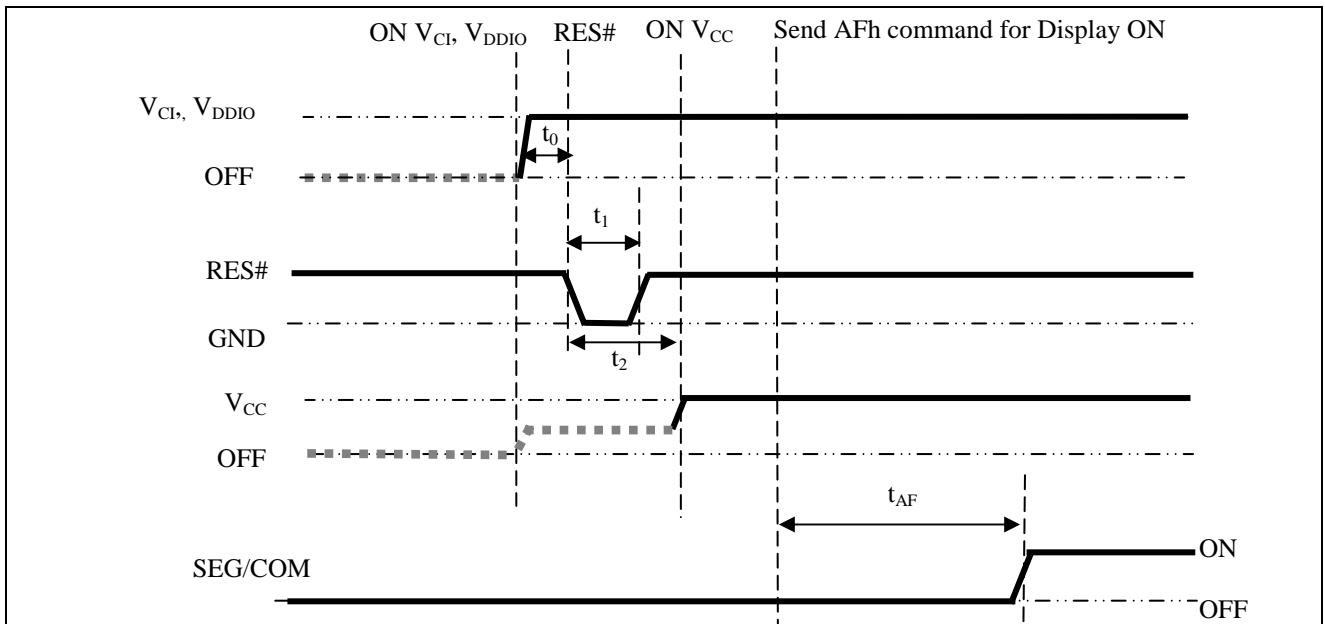

## 11. Power ON an OFF Sequence

The following figures illustrate the recommended power ON and power OFF sequence of SSD1322 (assume  $V_{CI}$  and  $V_{DDIO}$  are at the same voltage level and internal  $V_{DD}$  is used).

*Power ON sequence:*

1. Power ON  $V_{CI}$ ,  $V_{DDIO}$ .
2. After  $V_{CI}$ ,  $V_{DDIO}$  become stable, set wait time at least 1ms ( $t_0$ ) for internal  $V_{DD}$  become stable. Then set RES# pin LOW (logic low) for at least 100us ( $t_1$ )<sup>(4)</sup> and then HIGH (logic high).
3. After set RES# pin LOW (logic low), wait for at least 100us ( $t_2$ ). Then Power ON  $V_{CC}$ .<sup>(1)</sup>
4. After  $V_{CC}$  become stable, send command AFh for display ON. SEG/COM will be ON after 200ms ( $t_{AF}$ ).

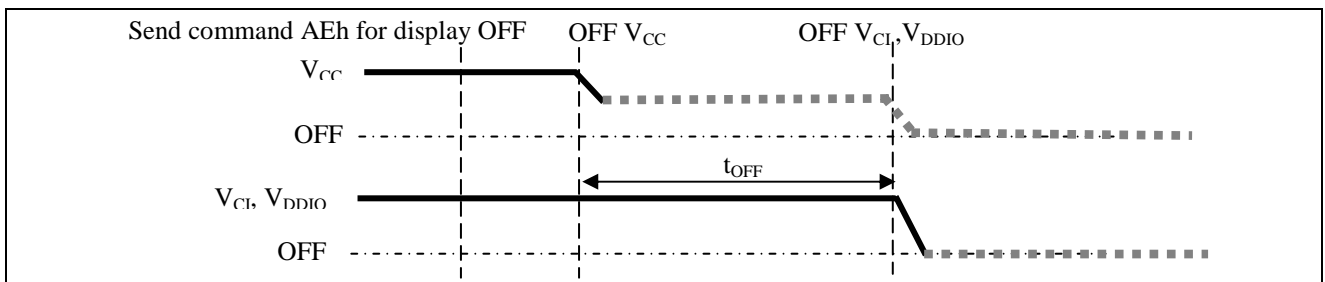

**The Power ON sequence.**

*Power OFF sequence:*

1. Send command AEh for display OFF.
2. Power OFF  $V_{CC}$ .<sup>(1), (2)</sup>
3. Wait for  $t_{OFF}$ . Power OFF  $V_{CI}$ ,  $V_{DDIO}$ . (where Minimum  $t_{OFF}=0ms$ <sup>(3)</sup>, Typical  $t_{OFF}=100ms$ )

**The Power OFF sequence**

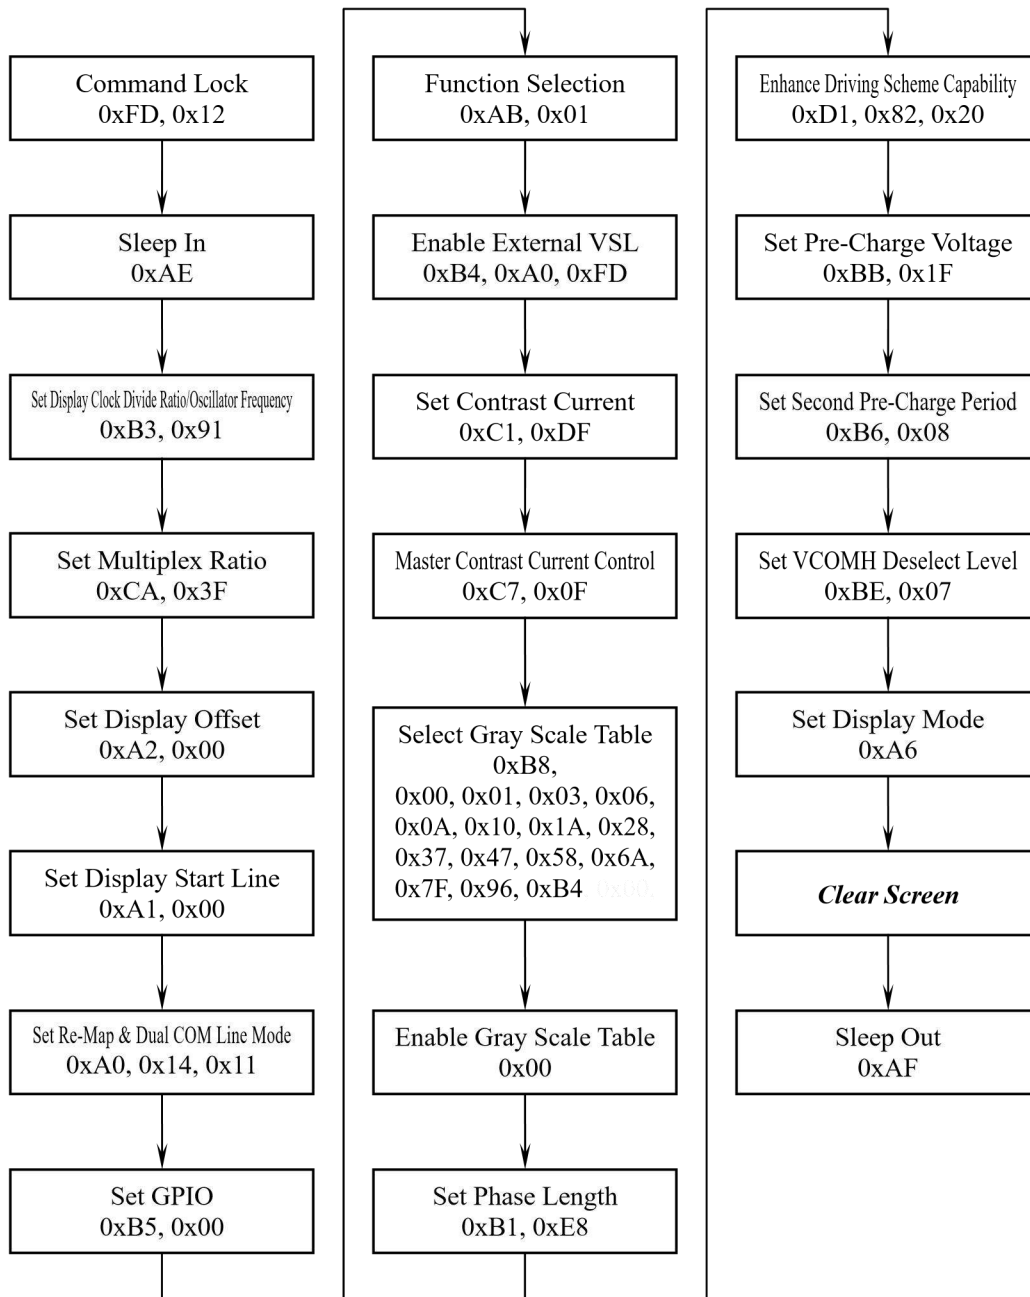

**Note:**

- (1) Since an ESD protection circuit is connected between V<sub>CI</sub>, V<sub>DDIO</sub> and V<sub>CC</sub>, V<sub>CC</sub> becomes lower than V<sub>CI</sub> whenever V<sub>CI</sub>, V<sub>DDIO</sub> is ON and V<sub>CC</sub> is OFF as shown in the dotted line of V<sub>CC</sub> in Figure 8-14 and Figure 8-15.
- (2) V<sub>CC</sub> should be kept float (disable) when it is OFF.
- (3) V<sub>CI</sub>, V<sub>DDIO</sub> should not be Power OFF before V<sub>CC</sub> Power OFF.
- (4) The register values are reset after t<sub>1</sub>.
- (5) Power pins (V<sub>DD</sub>, V<sub>CC</sub>) can never be pulled to ground under any circumstance.

## 14. Precautions

### 14.1 Handling precautions

- 1) Since the display panel is being made of glass, do not apply mechanical impacts such as dropping from a high position.
- 2) If the display panel is broken by some accident and the internal organic substance leaks out, be careful not to inhale nor lick the organic substance.
- 3) If pressure is applied to the display surface or its neighborhood of the OEL display module, the cell structure may be damaged and be careful not to apply pressure to these sections.
- 4) The polarizer covering the surface of the OEL display module is soft and easily scratched. Please be careful when handling the OEL display module.
- 5) When the surface of the polarizer of the OEL display module has soil, clean the surface. It takes advantage of by using following adhesion tape.

\* Scotch Mending Tape No. 810 or an equivalent

Never try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol, since the surface of the polarizer will become cloudy.

Also, pay attention that the following liquid and solvent may spoil the polarizer:

- \* Water
- \* Ketone
- \* Aromatic Solvents

- 6) Hold OEL display module very carefully when placing OEL display module into the system housing. Do not apply excessive stress or pressure to OEL display module. And, do not over bend the film with electrode pattern layouts. These stresses will influence the display performance. Also, secure sufficient rigidity for the outer cases.

- 7) Do not apply stress to the driver IC and the surrounding molded sections.
- 8) Do not disassemble nor modify the OEL display module.

- 9) Do not apply input signals while the logic power is off.
- 10) Pay sufficient attention to the working environments when handing OEL display modules to prevent occurrence of element breakage accidents by static electricity.
  - \* Be sure to make human body grounding when handling OEL display modules.
  - \* Be sure to ground tools to use or assembly such as soldering irons.
  - \* To suppress generation of static electricity, avoid carrying out assembly work under dry environments.
  - \* Protective film is being applied to the surface of the display panel of the OEL display module. Be careful since static electricity may be generated when exfoliating the protective film.
- 11) Protection film is being applied to the surface of the display panel and removes the protection film before assembling it. At this time, if the OEL display module has been stored for a long period of time, residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film. In such case, remove the residue material by the method introduced in the above Section 5).
- 12) If electric current is applied when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful to avoid the above.

## 14.2 Designing precautions

- 1) The absolute maximum ratings are the ratings which cannot be exceeded for OEL display module, and if these values are exceeded, panel damage may be happen.
- 2) To prevent occurrence of malfunctioning by noise, pay attention to satisfy the  $V_{IL}$  and  $V_{IH}$  specifications and, at the same time, to make the signal line cable as short as possible.
- 3) We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit ( $V_{DD}$ ). (Recommend value: 0.5A)
- 4) Pay sufficient attention to avoid occurrence of mutual noise interference with the neighboring devices.
- 5) As for EMI, take necessary measures on the equipment side basically.
- 6) When fastening the OEL display module, fasten the external plastic housing section.
- 7) If power supply to the OEL display module is forcibly shut down by such errors as taking out the main battery while the OEL display panel is in operation, we cannot guarantee the quality of this OEL display module.
- 8) The electric potential to be connected to the rear face of the IC chip should be as follows:  
SSD1322
  - \* Connection (contact) to any other potential than the above may lead to rupture of the IC.
